# Arslan Ziaf

Full-Stack Developer

cause.dev@proton.me Muzaffarabad, AJK https://arslanziafdev.vercel.app/ github.com/cause-dev

## Summary

Full-stack developer and ML engineer. I build web applications end-to-end — Next.js and React on the frontend, Django and Python on the backend. I also ship the surrounding infrastructure: containerized deployment, custom Linux images, and CI pipelines.

## Projects

**ApiVigil** Mar 2026 – Present

Django Python PostgreSQL Celery Redis HTMX Chart.js

Live API monitoring with scheduled health checks, uptime analytics, and latency charts.

- Built a Django backend for registering endpoints and scheduling background health checks via Celery workers queued through Redis; latency and status data persisted to PostgreSQL.
- **Built the dashboard in HTMX instead of a client-side framework — pages update in place without a separate frontend build or a JSON API, keeping the entire app in one Django codebase.**
- Rendered 24-hour latency trends and uptime analytics with Chart.js.
- Containerized Django, Postgres, Redis, and Celery workers with Podman/Docker Compose.

**Portfolio** Apr 2026 – Present

Next.js React Django Tailwind CSS Docker

Full-stack portfolio with a custom design token system and containerized deployment.

- Built a Next.js 16 frontend using Server Components and a Django REST backend.
- Designed a token-based design system — semantic colors, a 6px spacing rhythm, a four-level elevation ladder — used across 30+ components and enforced with Biome lint rules.
- Implemented CSS scroll-driven animations and a CSS-only scroll progress bar, replacing JavaScript scroll listeners with compositor-thread work.

**Custom Fedora Silverblue Image** Mar 2026 – Present

BlueBuild bootc OCI Podman Cosign Linux

Declarative, reproducible workstation OS built as a signed container image.

- Built a custom Fedora Silverblue image with BlueBuild, layering development tooling on top of the base system and removing packages I do not use to keep the installed set minimal.
- Published to GitHub Container Registry with automatic rebuilds from a declarative recipe.yml.
- **Signed the published image with Sigstore cosign** so updates can be verified before install.

## Skills

**Frontend Development**

Intermediate

React, Next.js, TypeScript, JavaScript, Tailwind CSS, HTMX

●●●○○

**Backend Development**

Intermediate

Django, Django REST, Python, PostgreSQL, Redis, Celery, MongoDB

●●●○○

**ML / Data**

Beginner

PyTorch, NumPy, pandas, LLM's

●○○○○

**Systems & Infrastructure**

Intermediate

Linux, Docker, Podman, Git, Bun, BlueBuild
